Subject: McGuire Nuclear Station, Units 1 and 2
Docket Nos. 50-369 and 50-370
NRC Generic Letter 92-08, Thermo-Lag 330-1 Fire
Barriers
Response to NRC request for additional information

Dear Sir:

By letter dated May 5, 1994, notice was given to your office concerning the on going reevaluation of Appendix R safe shutdown efforts by the Engineering staff of McGuire Nuclear Station. A goal of June 30, 1994, was established as the response date by which time the results of the reevaluation of Appendix R criteria dealing with the use of Thermo-Lag insulation in the Unit 1 Auxiliary Building pipe chase and the Unit 2 Motor Driven Auxiliary Feedwater Pump Room would be forwarded to you.

To this end, please be advised that the reevaluation has been completed and has determined that the above areas of McGuire Nuclear Station employing Thermo-Lag can be brought into compliance with NRC fire protection regulatory requirements. A preliminary review of the scope of activities indicates that several plant modifications will be required in the planned course of action. The planning phase will commence shortly and a schedule of implementation will be forwarded to you no later than December 1, 1994. The remaining schedule dates as communicated in the February 11, 1994 letter to your office remain in effect at this time.

Please contact John M. Washam at (704) 875-4181 if there are any questions regarding this matter.

Very truly yours,

T. C. McMeekin
