EVENT DESCRIPTION AND PROBABLE CONSEQUENCES 10

EVENT DESCRIPTION AND PROBABLE CONSEQUENCES 10

On 4/5/83, while in hot shutdown, the outboard bearing temperature for the steam driven emergency feedwater (EFW) pump P-7A exceeded the limits of the monthly surveillance test. P-7A was taken out of service for investigation thereby entering the requirements of Technical Specification (T.S.) 3.4.5. This occurrence is reportable per T.S. 6.12.3.2.b. The electric driven EFW pump P-7B and its associated train were operable. LER's (50-313) regarding EFW pump bearings were 77-003 and 79-007.

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS 27

CAUSE DESCRIPTION		CORRECTIVE ACTIONS
1	0	The high bearing temperature occurred because the balance drum clearances were improperly set during maintenance on P-7A. The balance drum clearance setting is an infrequent maintenance activity and the procedure did not contain detail instructions for performing this activity. The balance drum clearances were reset. The EFW pump maintenance procedure will be revised to provide separate, more explicit sections for special maintenance such as balance drum clearance settings. P-7A is a model 4HMTA-9 STG manufactured by INGERSOLL-RAND.
