EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)

On April 7, 1983, during a routine shutdown for refueling, results of testing of 4 mechanical snubbers revealed that the devices did not meet the Technical Specification Surveillance Requirement 4.7.9c. The snubbers were located on the Safety Injection and Main Steam Systems. The snubbers were all small bore devices and were of the same manufacture. Due to the possibility that the devices were inoperable during operation in elevated modes, the event constituted possible operation in a degraded mode in accordance with Technical Specification 6.9.1.9b. (82-034)

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27)

1 0 Two of the snubbers which failed testing have been returned to the manufacturer for

1 1 analysis of the failures. Additional testing is being performed, in accordance with

1 2 the Technical Specifications. Upon completion of further testing and investigation,

1 3 repair or replacement of snubbers will be performed as necessary.
