November 2, 1994

Alexander Dromerick
Senior Project Manager
Project Directorate I-4
Division of Reactor Projects- I/II
Office of Nuclear Reactor Regulation
U.S. Nuclear Regulatory Commission
One White Flint North
111555 Rockville Pike
Rockville, Maryland 20852

Mr. Dromerick:

I am writing with regards to the forthcoming meeting between GPU Nuclear and NRC on November 4th, 1994 to discuss the design and repair of the modified Oyster Creek Core Shroud and the exemption of the meeting from "Open Meeting Statement of NRC Staff Policy."

A October 25, 1994 notice from NRC stated that the meeting was closed as the material related to "safeguards information." However, a follow-up telephone conversation to your office today clarified that a misprint had been entered for what was in fact deemed "proprietary information."

As a active petitioner under 10 CFR 2.206, Nuclear Information and Resource Service requests that the material be segregated into proprietary and non-proprietary sections and that the meeting be opened to the public for the non-proprietary portion.

We further understand that the staff has not yet made a determination on what materials will be considered proprietary. If this cannot be accomplished before the November 4th meeting date, we request that the meeting be postponed until the material can be segregated and the public allowed to attend the non-proprietary portion.

Thank you for your cooperation,
