EVENT DESCRIPTION AND PROBABLE CONSEQUENCES 10

0	2	During refueling outage after performing Bus Undervoltage and ECCS Functional																								
0	3	Test (DOS 6600-5), core spray injection valve MO 1402-25B stayed open when a close																								
0	4	signal was given. There was no effect to public health and safety. The event is																								
0	5	of minimal safety significance since other safety systems were operable and the																								
0	6	unit was shutdown. Last occurrence reported by R.O. 83-2 on Docker 50-237.

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS 27

1	0	Event due to procedural inadequacy. Breaker was incorrectly set at 2 instead of																								
1	1	5 because of use of incorrect data sheet not controlled by station procedure.																								
1	2	Originally, breaker was replaced. During subsequent investigation incorrect																								
1	3	breaker setting was discovered. Breaker was set at 5 and correct data sheet is																								
1	4	being added to station procedure.
