Subject: LaSalle County Station Units 1 and 2
Closeout Response to NRC Generic Letter 88-14
NRC Docket Nos. 50-373/374

References: (a) NRC Generic Letter 88-14, dated August 8, 1988.
(b) M. Richter letter to U.S. NRC, dated February 6, 1989.
(c) D. Taylor letter to U.S. NRC, dated August 21, 1990

Dear Sir:

Reference (a) requested that all holders of operating licenses or construction permits for nuclear power reactors review NUREG-1275, Volume 2, and perform a design and operations verification of the instrument air system. Reference (b) presented Commonwealth Edison Company's (CECo) initial response to Reference (a). Reference (c) presented the results of the design verification for LaSalle County Station. Reference (c) also indicated that five Unit 1 pressure regulators would be replaced during the Spring 1991 refueling outage. In addition, Reference (c) indicated that completion of revisions of operating procedures for Loss of Instrument Air were expected by December 31, 1990. This letter confirms therefore, that the noted Unit 1 regulators have been replaced and the pertinent operating procedure revisions have been made for LaSalle County Station.

This correspondence thus completes the reporting requirements and action items for Generic Letter 88-14 for LaSalle County Station.

Please address any questions concerning this response to this office.

Respectfully,

Darrell Taylor
Nuclear Licensing Administrator
