Docket No. 50-336

June 27, 1991

MP-91-533

U.S. Nuclear Regulatory Commission
Attention: Document Control Desk
Washington, D.C. 20555

Gentlemen:

Millstone Nuclear Power Station, Unit No. 2
Core Operating Limits Report - Revision 2

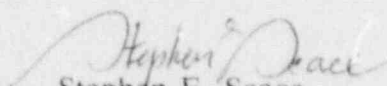

The Millstone Unit No. 2 Core Operating Limits Report (COLR) has been revised to incorporate the specific methodology references that are used to develop the cycle-specific parameter limits used in the COLR. This revision and a proposed Technical Specification change to Section 6.9.1.7 will fulfill the NRC commitment required as part of Amendment No. 148.⁽¹⁾

Additionally, the figure for the Power Dependent CEA Insertion Limit has been revised to index the CEA heights in steps withdrawn instead of percent of CEA insertion. This change will allow the CEA Insertion Limit figure to be more readily used by the reactor operators.

In accordance with the Millstone Unit No. 2 Technical Specifications, Section 6.9.1.7.d, we hereby submit Revision 2 to the Millstone Unit No. 2 COLR.

Very truly yours,

NORTHEAST NUCLEAR ENERGY COMPANY

Stephen E. Scace
Director, Millstone Station

cc: T.T. Martin, Region I Administrator
G.S. Vissing, NRC Project Manager, Millstone Unit No. 2
P. Habighorst, Resident Inspector, Millstone Unit No. 2
W.J. Raymond, Senior Resident Inspector, Millstone Unit Nos. 1, 2, and 3

⁽¹⁾ G.S. Vissing letter to E.J. Mroczka, Issuance of Amendment No. 148 (TAC No. 77063), dated October 12, 1990.
