Docket No. 50-277  
50-278

Dr. Thomas E. Murley, Administrator  
Office of Inspection and Enforcement  
U.S. Nuclear Regulatory Commission  
631 Park Avenue  
King of Prussia, PA 19046

Subject: Additional Limiting Conditions for  
Operation dealing with Reactor  
Coolant Leakage for Philadelphia Electric  
Company's Peach Bottom Station

Reference: Letter to Dr. T.E. Murley, from  
S. L. Daltroff, dated August 9, 1983;  
Response to I.E. Bulletin 83-02 for  
Peach Bottom Unit 3

Dear Dr. Murley:

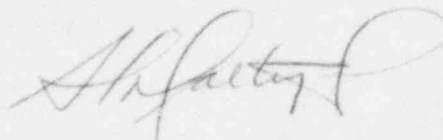

As a result of a telephone conversaton with Peach Bottom's NRC Project Manager, attached are surveillance requirements and limiting conditions for operation for Peach Bottom Unit 2 and Unit 3. We commit to implement these conditions for operation until such time as the Technical Specifications are amended. These surveillance requirements and limiting conditions for operation will supersede the ones transmitted to you in the reference letter.

In addition, we commit to submit our plans for inspection, corrective actions and/or any modifications, including replacement of the recirculation and/or other reactor cooling pressure boundary piping systems for the next Unit 3 refueling outage. These plans will be submitted to the NRC for review at least three months before the start of the next refueling outage.
