50-424, Readiness Review Program, GN-424 C
October 3, 1984

Attention: Mr. J. Nelson Grace

Module 9B of the Vogtle Unit 1 Readiness Review Program, entitled Chemistry, is enclosed for review and acceptance by the Nuclear Regulatory Commission.

Based on the review detailed in this module, I am of the opinion that adequate controls exist to ensure the quality of work and the implementation of specific FSAR commitments within the scope of the module. Moreover, none of the findings identified, either individually or collectively, are such that the adequacy of the project chemistry program is called into question.

The information herein is, to the best of my knowledge, factual and technically correct.

This submittal contains no proprietary information and may be placed in the NRC Public Document Room.

Very truly yours,

D. O. Foster

Vogtle Readiness Review:

6/12/86

1. Review approved procedures, note which procedures were in draft.

2. Treat the "plant will have" statements by reviewing the approved implementing procedures, but make statement in report that facilities will reviewed during a future inspection.

3. Look at Section 7(?) - Licensee-identified problems to see if you agree with their findings.
