TECHNICAL SPECIFICATION AMENDMENT to Application for
Amendment to Facility Operating License:

Byron Station Units 1 and 2
(NPF-37/66; NRC Docket Nos. 50-454/455)

"Steam Generator Interim Plugging Criteria"

Reference: D. Saccomando letter to Document Control Desk
transmitting Additional Information Regarding
Application for Amendment to Facility
Operating License Steam Generator Interim
Plugging Criteria for Byron Station
dated October 17, 1994

In the reference letter, Commonwealth Edison Company (ComEd), Byron Station transmitted to the Nuclear Regulatory Commission a summary of the Byron Unit 1 inspection results, leak and burst calculational methodology, projected end-of-cycle 7 leak and burst results, and a safety assessment of these results. In this letter, Byron Station also stated that they were planning a Unit 1 shutdown in mid-September of 1995 to perform steam generator eddy current inspections. ComEd would like to further clarify that Byron Station commits to initiate a shutdown of Unit 1 no later than September 15, 1995, in order to perform eddy current inspections of Unit 1 steam generators. If you have any questions regarding this correspondence please contact this office.

Sincerely,

Denise M. Saccomando
Nuclear Licensing Administrator
