Subject: Docket No. 50-482: Secondary Access Facility

Gentlemen:

This letter provides information concerning the addition of a Secondary Access Facility (SAF) at Wolf Creek Generating Station as shown on the attached drawing. The SAF was constructed to provide a more convenient access to new office areas inside the Protected Area Boundary (PAB) and to provide increased utilization of existing parking areas.

The Operational Characteristics of the SAF mimic the existing Security Entrance Facility. Access control requirements are maintained through the use of explosive detection equipment, metal detection equipment and x-ray equipment located inside the SAF. The SAF, when in use, is manned by security personnel located within a bullet resistant structure inside the SAF. Security personnel located within the bullet resistant structure have the last access control function capability (i.e., they can control the turnstile function). The facility is equipped with security communication devices. (Security Radio base station and Security Gaitronics) The intrusion detection system and closed circuit television system have been modified to bring this facility into the PAB and maintain the required intrusion detection and alarm assessment capability.

Revision 25 of the Wolf Creek Generating Station Security Plan will incorporate provisions for the SAF.

If you have any questions concerning this matter, please contact me at (316) 364-8831 extension 4450 or Mr. Richard D. Flannigan at extension 4500.

Very truly yours,
