U. S. Nuclear Regulatory Commission
Att: Document Control Desk
Washington, DC 20555

Dear Sir:

Subject: Oyster Creek Nuclear Generating Station
Docket No. 50-219
Summary Description for Protection Against Malevolent
Use of Vehicles at Nuclear Power Plants

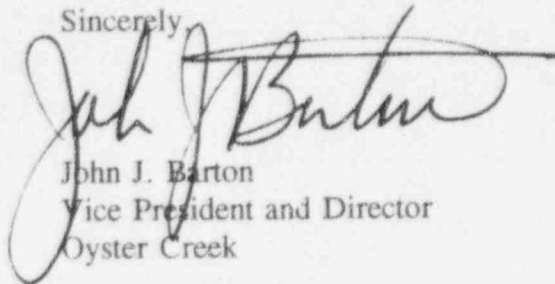

This summary description is submitted in accordance with the provisions of 10 CFR 73.55(c)(9)(i). Our proposed vehicle control measures, Enclosure 1, as required by 10 CFR 73.55(c)(7) will protect against use of a land vehicle as a means of transportation to gain unauthorized proximity to vital areas. Further, the results of the vehicle bomb comparison, Enclosure 2, as required by 10 CFR 73.55(c)(8) show the control measures will stop the design basis vehicle and explosive outside the safe standoff perimeter defined in NUREG/CR-6190 Volumes 1 and 2. We can confirm that the vehicle control measures meet the design goals and criteria specified by the Commission. No exemptions or alternate measures to meet the design goals and criteria are being requested. A site diagram on GPUN Drawing 3E-120-01-003, Sheet 1 of 4, Rev. N, Enclosure 3, that outlines the Vehicle Barrier System (VBS) and identifies the active and passive components of the VBS has been included with this summary description.

Only Enclosure 2 contains Safeguards Information and must be withheld from public disclosure in accordance with 10 CFR 73.21.
