Supplemental Form 3  
July - December 1994

ILLINOIS POWER COMPANY  
Clinton Power Station  
PERFORMANCE DATA

On December 12, 1994 a major procedure change was completed revising sanctions for individuals returning to Clinton Power Station following positive drug and alcohol tests.

-----

Clinton Power Station continues its observance of the procedures and protocols for testing for alcohol and onsite laboratory testing for illegal drugs conforming to 10CFR26 requirements.

-----

\* Clinton Power Station tests all site employees with and without unescorted access privileges.

-----

\*\* Numbers given reflect testing of those individuals placed on a monitoring program per the Medical Review Officer's (MRO) recommendation due to background information and personal interviews by the MRO. These are unannounced tests, and the individuals are escorted from their jobs to the collection site for testing. Also included in these numbers are those tests which are repeated because of low specific gravity or low creatinine results on the initial urine tests. We have experienced a very low number of low specific gravity and low creatinine test results requiring repeat tests. We attribute this to the fact that we escort our randoms to the testing site without advance notice allowing us to monitor the amount of fluid intake prior to testing.
