November 21, 1994

U.S. Nuclear Regulatory Commission
Document Control Desk
Washington, D.C. 20555

Ladies & Gentlemen:

Subject: Hope Creek Generating Station (HCGS)
Docket No.50-354 -- Facility Operating License NPF-57
Request for a Cost Beneficial Licensing Action (CBLA)
for the Revision to License Amendment Application
LCR 88-05, "Permanent Hydrogen Water Chemistry System"

On August 17, 1994, Public Service Electric and Gas Company (PSE&G) responded to the State of New Jersey's questions (Re: 7/8/94 NJ DEP letter to the NRC) on the aforementioned subject. In responding to a New Jersey Department of Environmental Protection's Bureau of Nuclear Engineering (BNE) question, PSE&G stated, in part, that "In the event of the most limiting site specific design basis ... station procedures have been revised to ensure the tube trailers would be removed off-site for this design basis flooding condition." The BNE recommends that more specific information on existing or proposed procedures capable of accomplishing such a timely removal of the tube trailers off-site, be made available for NRC's review.

In addition, on August 18, 1994, the NRC made a Request for Additional Information (RAI) to PSE&G, containing six questions.

On October 24, 1994, via letter NLR-N94185, PSE&G submitted its response to NRC's questions.

The BNE routinely reviews the License Amendments Requests (LCRs) submitted by licensees in accordance to the provisions of 10 CFR 50.91(b). The BNE reviewed said PSE&G response and has no comments.
