February 8, 1995

Richard E. Stephens, Director
Office of University and Science Education
U.S. Department of Energy
Washington, D.C. 20585

Reference: USNRC License R-33, Docket 50-73.

Dear Dr. Stephens:

The General Electric Company operates the General Electric Nuclear Test Reactor (NTR) at the Vallecitos Nuclear Center under the provisions of USNRC License R-33. The NTR operates at a maximum power of 100 kW utilizing fully enriched U-Al alloy fuel.

In order to comply with 10CFR50.64, General Electric requests that DOE provide funding during the Fiscal Year 1995 to permit the conversion of the NTR from HEU fuel to LEU fuel. If such funding is not available in FY 1995, General Electric would appreciate any information on when the funding might be made available.

Thank you.

Sincerely,

G. E. Cunningham
Senior Licensing Engineer
