Attn: Document Control Desk  
Washington, DC 20555

Dear Sir:

Subject: Three Mile Island Nuclear Station, Unit 1 (TMI-1)  
Operating License No. DPR-50  
Docket No. 50-289  
NRC Bulletin 88-11, "Pressurizer Surge Line Thermal  
Stratification" (TAC NO. M72174)

GPU Nuclear submitted its final response to NRC Bulletin 88-11 on March 20, 1991. The NRC's Safety Evaluation Report (SER) dated October 12, 1994, which approved the B&W Owners Group (BWO) reports BAW-2127 and BAW-2127 Supplement 2, requested a 60-day response to confirm that all actions required by the NRC Bulletin 88-11, including updating of plant-specific stress and fatigue analyses of Action 1.d, have been completed.

The purpose of this letter is to reconfirm that all actions requested by Bulletin 88-11 have been completed for TMI-1. And, more specifically, the B&W Certifications BAW-33-1229687 and BAW 33-1229688 serve to document the completion of design calculations necessary to update the original stress report for TMI-1. These design calculations were made available to the NRC for review prior to development of the SER.

Sincerely,

T. G. Broughton  
Vice President and Director, TMI
