(b) Letter, VYNPC to USNRC, FVY 83-35, dated 8/4/83  
(c) Letter, USNRC to All Operating Reactors, GL 82-33,  
dated 12/17/82

Dear Sir:

Subject: NUREG 0737, Supplement I: Emergency Operations Facilities

By Reference (b), we provided you with supplemental information with regard to our plans and schedules to address the concerns of NUREG 0737, Supplement I, forwarded to us via Reference (c). Reference (b) included a commitment by us to provide you with our specific plans for Emergency Operating Facilities (EOF's), pending the completion of a site evaluation study scheduled to be completed by October 4, 1983.

We have recently completed our Preliminary Site Evaluation Study which indicates that there are two viable options for the location of our primary EOF. One of these sites is near to the plant site, while the other is adjacent to our Corporate office building, located 8.75 miles from the plant site. However, we find that we require additional time to adequately assess the advantages of one site over the other. This assessment includes:

- o response times associated with activating the facility;

VERMONT YANKEE NUCLEAR POWER CORPORATION

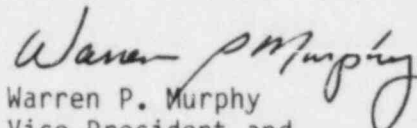

- o communications between the EOF and the plant; and
- o possible establishment of a forward control point for certain emergency activities, should the primary EOF be located at the Corporate office building.

The assessment discussed above is scheduled to be completed in early November 1983. A final decision on the ultimate location of the primary EOF will be made by November 19, 1983. At that time, it is our intent to inform you of our finalized EOF plans as well as a proposed schedule for having the EOF operational.

We trust that the additional time necessary to make a final decision in this matter is acceptable; however, should you have any questions or desire further information, please contact us.

Very truly yours,

VERMONT YANKEE NUCLEAR POWER CORPORATION

  
Warren P. Murphy  
Vice President and  
Manager of Operations
