February 17, 1984

Mr. Darrell G. Eisenhut, Director
Division of Licensing
Office of Nuclear Reactor Regulation
U. S. Nuclear Regulatory Commission
Washington, D.C. 20555

SUBJECT: COMANCHE PEAK STEAM ELECTRIC STATION
DOCKET NOS. 50-445 AND 50-446
RESPONSE TO GENERIC LETTER 83-35;
CLARIFICATION OF TMI ACTION PLAN
ITEM II.K.3.31

Dear Mr. Eisenhut:

Westinghouse, supported by the Westinghouse Owners Group (WOG), has developed the NOTRUMP Small Break Loss of Coolant Accident (SBLOCA) analysis code. NOTRUMP was specifically developed to address TMI Action Plan Item II.K.3.30. Development of NOTRUMP is complete; the code is currently under NRC review. The NOTRUMP Safety Evaluation Report (SER) is expected to be released in February 1984. Texas Utilities will then participate, as a member of WOG, in a program to demonstrate that the current Appendix K analyses are conservative with respect to the NOTRUMP predictions. This goal is to be accomplished by demonstrating, on a generic basis, the bounding conservatism of the WFLASH computer code used to develop the Appendix K analyses. The generic study will be completed within one year of the release of the NOTRUMP SER.

Sincerely,

H. C. Schmidt
