Docket No. 50-346
License No. NPF-3
Serial No. 1027
February 17, 1984

Director of Nuclear Reactor Regulation
Attention: Mr. John F. Stolz
Operating Reactor Branch No. 4
Division of Operating Reactors
United States Nuclear Regulatory Commission
Washington, DC 20555

Dear Mr. Stolz:

Under separate cover, we are transmitting three (3) original and forty (40) conformed copies of an application for Amendment to Facility Operating License No. NPF-3 for the Davis-Besse Nuclear Power Station Unit No. 1.

This application requests that the Davis-Besse Nuclear Power Station Unit 1 Technical Specifications, Appendix A, be revised to reflect the changes attached. The proposed changes involve:

Technical Specifications contained in Cycle 4 Reload Report
BAW-1783, Revision 1, October, 1983.

The attached revised reload Report is for the withdrawal of the Axial Power Shaping Rods (APSR) and coastdown at the end of Cycle 4. This part of the Reload Report was not completed when Cycle 4 report was submitted and approved for the current cycle. The current operation of Davis-Besse projects the need for this Reload Report to be issued by June 6, 1984.

This amendment request involves a change of Class III type. Enclosed is a check for \$4,000 as requested by 10CFR170.22.

Very truly yours,

RPC:GAB:lah
