EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)
02 On November 4, 1983, a Florida Power Corporation Quality Program audit
03 revealed that no surveillance procedure examined sensors during the channel
04 calibration for decay heat removal temperature indicators (T.S. 3.3.3.5).
05 This is the twelfth report under T.S. 3.3.3.5.

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27)
10 The cause of the incomplete surveillance was due to a procedural inadequacy.
11 The sensors, DH-2-TEL and TE2, were examined and found to be within allow-
12 able tolerances. Surveillance Procedure SP-161, Remote Shutdown Instrument
13 Calibration, will be revised, prior to the next scheduled calibration of
14 these channels, to include examination of sensors during channel calibration.

SUPPLEMENTARY INFORMATION

REPORT NO: 50-302/83-049/03L-0

FACILITY: Crystal River Unit 3

REPORT DATE: December 5, 1983

OCCURRENCE DATE: November 4, 1983

IDENTIFICATION OF OCCURRENCE:

The channel calibration for decay heat removal temperature remote shutdown monitoring instrumentation was not performed as required by Technical Specification 3.3.3.5.

CONDITIONS PRIOR TO OCCURRENCE:

Mode 1, 98% power.

DESCRIPTION OF OCCURRENCE:

On November 4, 1983, a Florida Power Corporation Quality Program Audit revealed a procedural inadequacy in that no surveillance procedure examined sensors during the channel calibration for decay heat removal temperature indicators.

DESIGNATION OF APPARENT CAUSE:

An inadequate procedure resulted in an incomplete channel calibration, as the heat removal temperature sensors were not examined.

ANALYSIS OF OCCURRENCE:

The affected sensors measure the temperature at the outlet of the decay heat removal heat exchangers and are indicated on the remote shutdown panel. As such, they do not perform a normal safety function. RTD's in general don't drift significantly. Any noticeable drift would have been revealed during periodic channel checks which have all been satisfactory. As the subsequent RTD calibration was within limits, this occurrence is not considered to have had any significant effect on plant safety.

CORRECTIVE ACTION:

The sensors, DH-2-TE1 and DH-2-TE2 were examined and found to be within acceptable tolerances.

Surveillance Procedure SP-161, Remote Shutdown Instrument Calibration, will be revised to include examination of sensors during channel calibration.

FAILURE DATA:

This is the twelfth event reported under Technical Specification 3.3.3.5.
