Attention: Mr. J. P. O'Reilly, Regional Administrator

Dear Mr. O'Reilly:

SUBJECT: Grand Gulf Nuclear Station
Unit 1
Docket No. 50-416
License No. NPF-13
File 0260/L-835.0
Special Report 83-104/0 - Fire
Rated Penetration CE-515D
Found Open
AECM-83/0768

On October 24, 1983, fire rated penetration CE-515D, located in the west wall of Room OC403 on elevation 148 feet in the Control Building, was discovered open. Penetration CE-515D was previously identified on MNCR 103-83 as a nonconformance. However, due to incomplete identification on the penetration the wrong penetration (CE-515D A) was sealed. To preclude further occurrence we are in the process of permanently labeling all penetrations to differentiate between mechanical and architecture drawings by adding the suffix letter "A" to all penetrations shown on architecture drawings.

Fire watches were established in accordance with Technical Specification 3.7.7 within one (1) hour and will continue until the penetration is sealed. This Special Report is submitted pursuant to Technical Specification 6.9.2 as the seven (7) day time limit of Technical Specification 3.7.7 was exceeded. The penetration has been resealed and is presently awaiting closure of paperwork. The relabeling of penetrations is expected to be completed by April 30, 1984.

Yours truly,

L. F. Dale
Manager of Nuclear Services
