EDWIN I. HATCH NUCLEAR PLANT UNITS 1, 2
ADDENDUM TO REQUEST FOR TECHNICAL SPECIFICATION CHANGE
ALLOWING PLANT OPERATION WITHOUT FORCED RECIRCULATION FLOW

Gentlemen:

By letter dated November 28, 1983 Georgia Power Company (GPC) proposed an amendment to the Edwin I. Hatch Units 1 and 2 Technical Specifications (Appendix A to each Operating License) which would allow plant operations for up to 30 minutes without forced recirculation flow. This submittal referenced the General Electric Company (GE) document NEDO-30059, Class I, February 1983, "Power Operation of the Hatch 1 and 2 Reactors Without Forced Recirculation."

GPC had intended to include the GE document as part of the November 28, 1983 submittal, however it was inadvertently not enclosed. Therefore, NEDO-30059 is hereby enclosed for use by the NRC as part of the review of the above mentioned Technical Specification change proposal.

Pursuant to the requirements of 10 CFR 50.92, J. L. Ledbetter of the Georgia Department of Natural Resources will be sent a copy of this letter and the enclosure.

Sincerely yours:
