Reference: Facility Operating License DPR-65
Docket No 50-336
Reportable Occurrence RO-50-336/83-30

Dear Dr. Murley:

This letter provides notification of Reportable Occurrence 83-30 pursuant to the requirements of Millstone Unit 2 Appendix A Technical Specifications, Section 6.9.1.8.b. This report concerns the operation of a system subject to a limiting condition of operation in a manner less conservative than the least conservative aspect of the limiting condition established in the technical specifications.

Fuel movement took place in the spent fuel pool while credit was taken for the B facility Enclosure Building Filtration System (EBFS). The B EBFS facility was discovered to be inoperable due to the installation of a temporary block wall which was not seismically qualified.

It should be noted that both the A and B facilities were available. However, no credit could be taken for the A facility due to a lack of emergency power (A Diesel out of service) and the B facility did not meet the definition of an operable system (Installation of a non-seismically qualified wall jeopardized the operation of the B EBFS facility).

Further information will be provided in the two week report.

Yours truly,

NORTHEAST NUCLEAR ENERGY COMPANY
