Docket No. 50-271
Reportable Occurrence No. LER 83-29/3L

Dear Sir:

As defined by Technical Specifications for the Vermont Yankee Nuclear Power Station, Section 6.7.B.2, we are reporting the attached Reportable Occurrence as LER 83-29/3L.

Very truly yours,

James P. Pelletier
Plant Manager

Cause Description and Corrective Actions

The occurrence was caused by an error on the part of the Health Physics Technicians who sent the second and third monthly composites late and with a wrong cover letter which did not require a gross alpha analysis. The required analysis has since been completed, and the sampling procedure has been reviewed with the individuals involved.

A review of the First quarter stack alpha analysis, and the first and second quarter reactor coolant alpha analysis and other related parameters did not reveal any reason to suspect other than normal levels of alpha activity during this time frame. When the actual sample results for the second and third month of the second quarter are evaluated they will be included in an update to the semi-annual radioactive effluent release report. This is considered an isolated incident and no further corrective action is anticipated.
