EVENT DESCRIPTION AND PROBABLE CONSEQUENCES																			
On 2/17/83, with Unit 2 in Mode 5, Zone 1 Fire Detector Electrical																			
Panel 2L-204 failed the 6-month supervisory circuit Surveillance Test																			
S023-I-2.62. On 2/22/83, with Unit 3 in Mode 5, the Unit 3 panel,																			
3L-204, failed the same surveillance. In accordance with LCO 3.3.3.7,																			
Action Statement 'a', each containment's ambient air temperature was																			
monitored or fire watches were posted when the containment was acces-																			
sible. Public health and safety were not affected.

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS																			
The panels were rendered inoperable when their supervisory circuits																			
were disconnected as a result of modifications to the system. Detectors																			
and deluge systems remained operable. Since some components are inside																			
containment, the circuits will be repaired during the next outage at each																			
unit. Compensatory measures will remain in effect until the systems																			
are returned to service. See LER 83-067, Unit 2.
