EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)

02 On 6/16/83, with Unit 3 in Mode 5, the Zone 67 fire detection and
03 actuation panel failed the 6 month supervisory circuit Surveillance Test
04 S023-I-2.62. In accordance with LCO 3.3.3.7, Action Statement 'a', an
05 hourly fire watch was posted within one hour. Detector and deluge
06 systems remained operable. Health and safety of the public were not
07 affected.

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27)

10 Subsequent maintenance investigation did not indicate any problems in
11 the circuit. The system was retested satisfactorily on 10/17/83 and
12 returned to service. This is considered a spurious failure and
13 no further corrective action is planned.
