Docket No. 50-346

License No. NPF-3

Serial No. 1013

December 27, 1983

Director of Nuclear Reactor Regulation
Attention: Mr. John F. Stolz
Operating Reactors Branch No. 4
Division of Operating Reactors
United States Nuclear Regulatory Commission
Washington, D.C. 20555

Dear Mr. Stolz:

This letter is being submitted to address the status of 10 CFR 61 Program Implementation at the Davis-Besse Nuclear Power Station.

Initial analyses of various radioactive waste streams have been completed for the Davis-Besse Station. The results of these analyses have been used to generate scaling factors and supporting technical bases for 10 CFR 61 program implementation.

Gamma spectroscopy will be used to measure certain radionuclides to which these scaling factors will be applied to quantify those radionuclides not directly measured.

This information will extend to implementation of 10 CFR 61 program requirements for waste classification, stabilization, and manifest reporting. We have written draft procedures for waste classification and manifest reporting.

We are prepared to implement these new procedures for radwaste shipments after December 27, 1983.

We will continue our efforts to refine the program in accordance with any new developments.

Very truly yours,

RPC:EHN:lrh
