Diablo Canyon Unit 1  
Operational Readiness - Additional Information

Dear Mr. Knighton:

On August 10, 1983, PGandE submitted a letter containing information on the status of actions required for Operational Readiness. All actions associated with the testing and operability of those penetrations providing access from the containment atmosphere to the outside atmosphere (airlock doors, equipment door, containment ventilation valves and external hydrogen recombiner isolation valves) have been completed. In addition, all activities required to establish containment integrity prior to plant heat up (Mode 4) have been completed (containment penetration isolation valve leak tests, airlock leak tests, and sealing system leak tests).

Kindly acknowledge receipt of this material on the enclosed copy of this letter and return it in the enclosed addressed envelope.

Sincerely,  
ORIGINAL SIGNED BY  
J. O. Schuyler
