Address Reply to: Post Office Box 767
Chicago, Illinois 60690

April 11, 1984

Mr. Harold R. Denton, Director
Office of Nuclear Reactor Regulation
U.S. Nuclear Regulatory Commission
Washington, DC 20555

Subject: Byron Station Units 1 and 2
Braidwood Station Units 1 and 2
Supplemental Information to the
Resolution of "Control of Heavy
Loads at Nuclear Power Plants"
NRC Docket Nos. 50-454/455, 50-456/457

References: See Attachment A

Dear Mr. Denton:

References (a) and (b) requested Licensees and Applicants to review controls for handling of heavy loads. References (c) thru (g) documented our review and response. References (h) and (i) are draft Phase I and Phase II Technical Evaluation Reports (TERs) by EG&G Idaho, Inc. with References (j) and (n) documenting our review and response to the TERs.

On April 6, 1984 a telecon was held between NRC, EG&G, Idaho and Commonwealth Edison to discuss our Reference (i) and (n) submittals. As a result of this discussion, it was determined that one item of information relative to Section 2.3.4C of our Phase I response should be provided. Following is our response to that information request.

Westinghouse is a recognized Company within the nuclear industry. Westinghouse used standard quality control procedures in the fabrication of the reactor vessel head lift rig and reactor internals lift rig.

Should you or your staff have any further questions, please contact this office.

Respectfully,

P. L. Barnes

P. L. Barnes
Nuclear Licensing Administrator
