License No. NPF-29
Core Operating Limits Report Submittal (Cycle 8),
Revision 3

GNRO-95/00064

Gentlemen:

Entergy Operations, Inc., is submitting for your use and information Revision 3 of the Core Operating Limits Report (COLR) for Grand Gulf Nuclear Station (GGNS). This report incorporates cycle specific information for GGNS Cycle 8 operation and is submitted in accordance with Technical Specification 5.6.5.

GGNS Cycle-specific reload parameters for MCPR, LHGR, and MAPLHGR operating limits are controlled by the Mechanical Standard, GGNS-MS-48.0, called the Core Operating Limits Report or COLR. An extensive review of the changes associated with the Cycle 8 reload has been performed. This review includes an Entergy Operations, Inc. technical review of Siemens Power Corporations' (SPC) calculations and methodologies, GGNS design and licensing basis documents, and previous NRC correspondence. A 10CFR50.59 safety evaluation performed for the Cycle 8 reload determined that there were no unreviewed safety questions associated with the changes.

Entergy Operations, Inc. has worked closely with SPC in the above evaluation and has concluded that operation through Cycle 8 will not result in any fuel exceeding its analyzed exposure limit.

Yours truly,

CRH/MLJ/acg
