

April 30, 1973

Mr. James P. O'Reilly, Director
U. S. Atomic Energy Commission
Region 1
Directorate of Regulatory Operations
970 Broad Street
Newark, New Jersey 07102

Subject: R. E. Ginna Nuclear Power Plant, Unit No. 1
Docket No. 50-244

Dear Mr. O'Reilly:

On November 1, 1972 we transmitted a letter to you outlining our program for demonstrating acceptable wall thickness on valves important to nuclear safety. The schedule for that program called for transmitting justification to you by May 1, 1973 for accepting valves ordered to ratings higher than actually required by service conditions.

Accumulation of valve records and performance of the engineering review have been in progress for some time. We now have most of the required records and have completed much of the engineering review. We have experienced delays in obtaining the records from the suppliers and it now appears that we will not be able to submit this information for another thirty days.

Very truly yours,

Keith W. Amish
