U. S. Nuclear Regulatory Commission
230 Peachtree St. NW
Atlanta, Georgia

Gentlemen:

I am writing because I am greatly concerned about the radiation leaks from the spent fuel ponds at the Florida Power & Light Company's Turkey Point nuclear power plant.

This plant should be shut down immediately until this leak is repaired, and in fact until the total plant is carefully checked for other problems. This incident shows that the entire plant is operated poorly, and that other malfunctions, or even a meltdown and rupture of the entire plant, are not impossibilities.

Needless to say, the radiation being released by Turkey Point is exceeding even the federal allowances for routine emissions.

PLEASE check this plant and spare Miami a possible catastrophe.

Thank you.

Sincerely,

Mrs. Carol Oppenheimer
