Dear Mr. Taylor,

Since almost 7 months now I have a 2.206 Petition in front of the Nuclear Regulatory Commission on a host of serious issues. I keep writing and writing to the NRC on these issues, and explaining over and over what the problems are ( a copy of my most recent letter is enclosed) and I feel like I am up against a brick wall. Actually, I might have more luck with a brick wall, at this rate. Please get my 2.206 Petition and read it all and then please grant my petition. I have clearly shown the hazards to human health and the environment /safety or common defense and security and a lot of other things that I am meant to do according to what I have read and I believe NRC is required under the Atomic Energy Act to do something. I have not been sent any copies of the licensees responses to my petition by NRC even though I asked, and only just found out how I might be able to get them. In a document I have from the US Senate, it says that under the Atomic Energy Act the NRC is responsible for ensuring that the use of nuclear materials poses no undue risk to the public health and safety. What I have in my petition clearly shows many risks. Please let me know your decision quickly, it is all very important.

Thank you,

*Pamela Blockey-O'Brien*
