REVISION OF PREVIOUS REQUESTS FOR  
TECHNICAL SPECIFICATION AMENDMENTS

Gentlemen:

On December 21, 1983, Georgia Power Company (GPC) submitted a request for changes to the Plant Hatch Unit 2 Technical Specification requirements for usage of the Traversing Incore Probe (TIP) system. This submittal contained a significant hazards evaluation as required by 10 CFR 50.92 (Attachment 3 to that submittal).

Recently, GPC revised its methodology for conducting significant hazards reviews for Technical Specification change proposals. As a result of this, GPC has rewritten the wording submitted to the NRC in the above mentioned letter. This revised review does not result in a change to the conclusions drawn in the original submittal. The attachment enclosed with this letter should be used to replace Attachment 3 to the December 21, 1983 TIP submittal. Note that the attachment number and title at the top of the enclosure to this letter coincide with the heading used in the previous submittal.
