Dr. Peter A. Morris
Director, Division of Reactor Licensing
United States Atomic Energy Commission
Washington, D. C. 20545

Dear Dr. Morris:

Re: Oyster Creek No. 1 Main Steam Isolation Valves
Docket No. 50-219

On December 24, 1969, Mr. George H. Ritter, Vice President of Jersey Central Power & Light Company wrote you with respect to the retesting of the main steam isolation valves at Oyster Creek Unit No. 1. In accordance with Mr. Ritter's letter, the scheduled shutdown for the testing of all four main steam isolation valves commenced on January 31, 1970.

The valves were tested according to accepted test procedures and corrected to meet Technical Specifications before the unit was restarted. Results of the tests were reviewed and accepted as meeting all applicable Technical Specification requirements.

A detail report has been prepared by the Plant Operations Review Committee, as required by Section 6.3 A of the Technical Specifications to Provisional Operating License No. DPR-16, and is herein forwarded you as a supplement to Mr. Ritter's letter.
