EDWIN I. HATCH NUCLEAR PLANT UNITS 1, 2
SUBMITTAL OF PROCEDURES GENERATION PACKAGE
FOR EMERGENCY OPERATING PROCEDURES

Gentlemen:

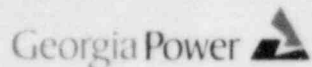

Generic Letter 82-33 dated December 17, 1982, requires that NRC licensees submit a procedures generation package (PGP) at least three months prior to the start of formal operator training on the upgraded emergency operating procedures (EOPs). Accordingly, we hereby submit for NRC review, the enclosed PGP based on the guidelines of NUREG 0899.

Section 7.1 of NUREG 0899 states that licensees may request that the NRC perform a limited review of the PGP and provide a preliminary evaluation. Georgia Power Company (GPC) requests this evaluation in order to receive early NRC input and thereby avoid the possibility of extensive revisions to our final EOPs.

Please note the following related to the Unit 1 and Unit 2 Plant Specific Technical Guidelines: 1) page 85 of 93 (Suppression Pool Load Limit) will be provided at a later date due to calculational work still in progress; 2) page 34 of 93 makes reference to a calculation being performed by General Electric for the BWR Owners' Group which may change the value for the maximum subcritical banked rod withdrawal position; and 3) a new revision to the generic BWR emergency procedure guidelines may require a slight revision to values in the table on pages 71 of 93 and 80 of 93. These changes will result in only minor revisions to the Hatch EOPs. To avoid a delay in our EOP training schedule, we request that the NRC perform their review on the enclosed Rev. 0 PGP. Revisions as required will be sent later.
