REFERENCE GOAD CITIES NUCLEAR STATION UNIT ONE DOCKET NUMBER

50-254:

APR 29, APPENDIX A, SECTIONS 1.0.A.2, 3.0.F.2, 3.0.B.1.A, ON
 APRIL 5 1974 AT 3050H WITH THE UNIT ONE REACTOR IN COLD SHUTDOWN
 CONDITION AND THE REACTOR VESSEL HEAD REMOVED PRIOR TO REFUELING,
 THE REACTOR MODE SWITCH WAS TAKEN OUT OF THE SHUTDOWN MODE TO
 FORM REFUELING INTERLOCK CHECKS. THE LOW PRESSURE CORE AND CONTAINMENT
 COOLING SYSTEMS ARE INOPERABLE DUE TO THE SUPPRESSION CHAMBER
 BEING DRAINED FOR INSPECTION. THE ABOVE ACTION WAS THUS CONTRARY
 TO TECHNICAL SPECIFICATIONS 3.0.F.2. THE MODE SWITCH WAS RETURNED

TO THE SHUTDOWN POSITION WHEN THE VIOLATION WAS DISCOVERED AT
 APPROXIMATELY 4 O'CLOCK AM THE SAME DATE. THE SAFETY IMPLICATIONS
 OF THIS VIOLATION ARE MINOR SINCE THERE WAS NO WORK BEING
 DONE THAT HAD THE POTENTIAL TO DRAIN WATER FROM THE VESSEL.
