CORPORATION

Crystal River Unit 3
Docket No. 90-302

May 31, 1995
3F0595-07

U. S. Nuclear Regulatory Commission
Attn: Document Control Desk
Washington, D.C. 20555

Subject: Once Through Steam Generator Inspection, Technical Specification
Twelve-Month Report

Reference: A. FPC to NRC letter, 3F0594-01, dated May 25, 1994
B. FPC to NRC letter, 3F1194-10, dated November 30, 1994

Dear Sir:

Florida Power Corporation (FPC) is hereby providing the complete results of the Once Through Steam Generators (OTSGs) inspection performed during our Refuel Outage 9 (Spring 1994) as well as a final version of the report, "Evaluation of Crystal River 3 Pulled Steam Generator Tubes," we provided to you in Reference B.

The special report is provided in accordance with Technical Specification 5.7.2.c. The report contains the following information:

1. Number and extent of tubes inspected,
2. Location and percent of wall-thickness penetration for each indication of an imperfection, and
3. Identification of tubes plugged and tubes sleeved.

The information contained in the attached 12-month report supersedes information previously provided in Reference A pertaining to the items listed above.

The final version of the report provided in Reference B replaces the earlier version with change bars noting any actual changes made. This report is consistent with the technical bases provided in support of TSCRN 203, Revision 0 but addresses the tube pull results more broadly.

Sincerely,

G. L. Boldt,
Vice President
Nuclear Production
