Docket No. 50-254, DPR-29
Appendix A, Sections 1.0.A.2, 3.7.D.1, 6.6.B.1.a

Dear Mr. Keppler:

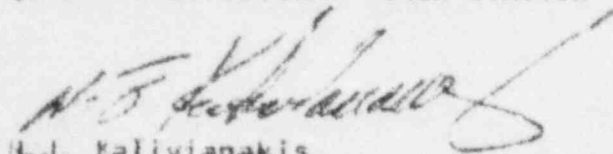

The purpose of this letter is to provide you with notification of an Abnormal Occurrence as required by Technical Specification 6.6.B.1.a within 24 hours of the occurrence.

At 9:15AM on July 21, 1975, with Unit 1 operating at 675 MW_e, Traversing Incore Probe (TIP) number 3 ball valve failed to close upon completion of the TIP trace. The key for the squib valve was immediately given to the Unit 1 operator for use in isolating the system if the need arose. The Shift Foreman then went to the TIP cubicle and tapped the valve, causing it to close at 10:30AM.

This occurrence was discussed by telephone with Mr. Feierabend of your office on July 22, 1975. Further information will be provided by Abnormal Occurrence Report AQ 50-254/75-17 which will be submitted within 10 days of the date of this occurrence.

Very truly yours,

COMMONWEALTH EDISON COMPANY
QUAD-CITIES NUCLEAR POWER STATION
