Subject: License Amendment Request 95-02: Temperature Limit for Reactor Coolant System  
(RCS) Oxygen Control

Gentlemen:

North Atlantic Energy Service Corporation (North Atlantic) encloses herein License Amendment Request 95-02. This License Amendment Request is submitted pursuant to the requirements of 10CFR50.90 and 10CFR50.4.

The purpose of License Amendment Request 95-02 is to propose changes to the Seabrook Station Technical Specifications to revise the footnote to Surveillance Requirement 4.4.7 and Table 3.4-2 to increase the temperature limit at which reactor coolant oxygen levels are determined by sampling from 180°F to 250°F. This change will provide operational flexibility when the unit is being brought on-line from a cold condition.

License Amendment Request 95-02 has been reviewed and approved by the Station Operation Review Committee and the Nuclear Safety Audit Review Committee.

As discussed in Section IV of the License Amendment Request, the proposed changes do not involve a significant hazards consideration pursuant to 10CFR50.92. A copy of this letter and the enclosed License Amendment Request have been forwarded to the State of New Hampshire State Liaison Officer pursuant to 10CFR50.91(b). In addition, North Atlantic has determined that License Amendment Request 95-02 meets the criteria of 10CFR51.22(c)(9) for a categorical exclusion from the requirements for an Environmental Impact Statement (see Section VI enclosed).

North Atlantic requests NRC review of License Amendment Request 95-02 and issuance of a license amendment by November 1, 1995 (see Section V enclosed).
