Subj. SAFETY REVIEW GROUP FORMATION

Date SEPTEMBER 4, 1979

This letter is to cover one customer and one subject only.

I suggest the following message be reviewed with Mr. MacMillan to determine whether he is in agreement with the concept and details of the formation of a safety review group. Based on previous conversations with him and with you, I believe that the following information should be satisfactory.

"It is my belief that actions are appropriate to further emphasize the attention being given to safety issues within the Nuclear Power Generation Division. Therefore, effective _____ 1979, an independent safety review group is being formed under the chairmanship of Mr. J. F. Mallay. The function of the safety review group is to review, with a broad perspective, the manner in which safety problems and issues are being handled within NPGD and to recommend to me corrective actions for strengthening those activities indicating the need for upgrade. In order to provide a broad perspective, the other members of the safety review group will be E. A. Womack, N. S. Elliott, D. W. Montgomery, E. V. DeCarli and J. H. Taylor. It is expected that they will require the assistance of other personnel periodically to carry out their function.

The safety review group's initial activity will include an assessment of:

the responsibility definition and procedures for handling safety matters

the resolution timeliness and priorities assigned to safety matters

the need for greater upper management involvement in safety matters

the general employee awareness of an attitude regarding safety matters

the breadth of evaluations involving safety matters

T14630

It is requested that the safety review group meet prior to September 15, 1979, and develop a plan for their near-term actions and that this plan be submitted to me prior to October 1, 1979. This plan should include an assessment of the extent to which chargeable manpower will be required to carry out the recommended near-term plan."
