Washington, D.C. 20555

SUBJECT: COMANCHE PEAK STEAM ELECTRIC STATION (CPSES) UNIT 1
DOCKET NO. 50-445
OPERATING LICENSE NPF-87
TECHNICAL SPECIFICATION SUBMITTAL ON
CORE OPERATING LIMITS REPORT

REF: 1) TU Electric letter logged TXX-91179 from William J. Cahill, Jr.,
to the NRC, dated May 24, 1991.

Gentlemen:

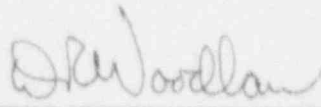

Via the referenced letter and pursuant to 10CFR50.90, TU Electric requested an amendment to its Operating License NPF-87 by incorporating proposed changes to the Technical Specification for CPSES Unit 1. When implemented, this License Amendment Request (LAR)-91-007 would allow, among other things, the relocation of cycle specific parameters to a Core Operating Limits Report. The specifics concerning this report are contained in the requested changes for Administrative Control section 6.9.1.6.

During the review of LAR-91-007, the NRC staff questioned the meaning of the word "CAOC" in Insert E, of Enclosure 3 to TXX-91179, page 29 of 32 (Reference 1). The word "CAOC" stands for Constant Axial Offset Control as identified in Insert D, of Enclosure 3 to TXX-91179, page 31 of 32 (Reference 1). Attached is a marked-up of Insert E to reflect the discussion above.

If you should have additional questions please contact Mr. D. R. Woodlan at 214/812-8225.

Sincerely,

William J. Cahill, Jr.
