Washington, DC 20555

Subject: Revision to Proposed Change No. 88 to Technical Specifications
Cooper Nuclear Station
NRC Docket No. 50-298, DPR-46

Reference: Letter, G. R. Horn to USNRC dated April 23, 1991, "Proposed Change
No. 88 to Technical Specifications, Control Rod Absorber Material"

Gentlemen:

In the above reference, the Nebraska Public Power District (the District) submitted a proposed change to the Cooper Nuclear Station Technical Specifications that would revise Specification 5.2.B regarding the allowed composition of control rods. Subsequent NRC staff review of this application generated a comment regarding this section of the specification. This has been resolved by revising Section 5.2.B and including a more detailed description of the allowed types of control rods for use at Cooper Nuclear Station. The revised page (Page No. 217) incorporating this change is attached for consideration. The District considers that the no significant hazards consideration contained in the reference to still be valid.

If you have any questions, please call.

Sincerely,

G. R. Horn
Nuclear Power
