United States Nuclear Regulatory Commission
Re: DOCKET # 50-289 - Three Mile Island

Gentleman:

From the old cliché, time waits for no man. A multi million dollar facility, remains idle when its resources could well be used for its sister plant.

This grist for the media and the anti nuke people could well hurt the United States economy and stature in the world. This unreasonable delay, creates fear through the media, and fertilizes the anti nukes.

As an ex service man, I can see enemies of our country such as the USSR & competing countries economically well pleased.

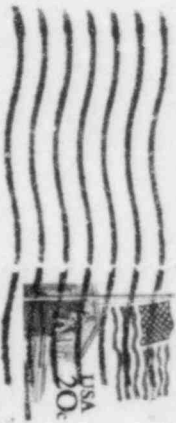

The nuclear power plants are all suffering by this unreasonable delay. For the good of our country, let's put all things in go!

YE 03
