Docket No. 50-285

APPLICATION FOR AMENDMENT
OF
OPERATING LICENSE

Pursuant to Section 50.90 of the regulations of the U. S. Nuclear Regulatory Commission ("the Commission"), Omaha Public Power District, holder of Facility Operating License No. DPR-40, herewith requests that the Technical Specifications set forth in Appendix A to that License be amended to reduce the minimum operable Containment Radiation High Signal channels from two to one, revise the requirement for placing the Safety Injection Refueling Water tank low level channels in "bypass" rather than "trip" and revise the Containment Radiation High Signal surveillance methods to be consistent with the applicable surveillance functions.

The proposed changes in Technical Specifications are provided in Attachment A to this Application. A Discussion, Justification and No Significant Hazards Consideration Analysis, which demonstrates that the proposed changes do not involve significant hazards considerations, is appended in Attachment B. The proposed changes in specifications would not authorize any change in the types or any increase in the amounts of effluents that will be released, or a change in the authorized power level of the facility.

WHEREFORE, Applicant respectfully requests that Specification 2.15, Basis Section, Specification 2.15 Tables 2-3 and 2-4, Specification 3.1, Table 3-2, and the Specifications Definitions Section of Appendix A to Facility Operating License No. DPR-40 be amended in the form attached hereto as Attachment A.

A copy of this Application, including its attachments, has been submitted to the Director - Environmental Health Division, Nebraska State Department of Health, as required by 10 CFR 50.91.
