Gentlemen:

Subject: Oyster Creek Nuclear Generating Station
Docket No. 50-219
Closeout of NRC Generic Letter 89-13

NRC Generic Letter 89-13, "Service Water System Problems Affecting Safety-Related Equipment", required licensees to supply information regarding their service water systems. It also recommended actions to be taken to assure these systems satisfy applicable general design criteria and quality assurance requirements. GPUN responded to the generic letter on January 30, 1990, and identified actions that would be taken that were appropriate for Oyster Creek.

The purpose of this letter is to confirm that all actions associated with the generic letter have been completed. Additional instrumentation was installed during the 13R outage to measure containment spray heat exchanger performance, and a performance monitoring program has been established. Documentation associated with these actions is available for inspection at Oyster Creek.

If there are any questions regarding this matter, please call Mr. Michael Heller, Licensing Engineer, at (609) 971-4680.

Sincerely,

for J.J. Barton
