Mr. Dennis M. Crutchfield, Chief  
Operating Reactors Branch No. 5  
Nuclear Regulatory Regulation  
U.S. Nuclear Regulatory Commission  
Washington, DC 20555

Dear Mr. Crutchfield:

Subject: Oyster Creek Nuclear Generating Station  
Docket No. 50-219  
Technical Specification Change Request No. 103

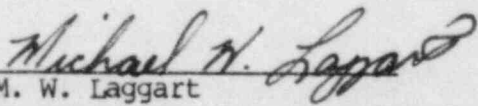

On July 18, 1983, we had requested a change to the Oyster Creek Technical Specifications. Since that time, there have been several discussions between GPUNC staff members and NRC staff members. On February 1, 1984, we provided a more detailed discussion of the change to support our original "No Significant Hazards" determination which was accomplished pursuant to 10 CFR 50.91.

Most recently, we have agreed with our staff to add one word to clarify a section of the Technical Specifications and to be in "Hot Shutdown Condition" if secondary containment is accidentally lost and cannot be restored within four (4) hours. Because there is no definition of "Hot Shutdown Condition" in the Oyster Creek Technical Specification, we have incorporated the Standard Technical Specification definition into the Limiting Condition for Operation (LCO) Action Statement.

For your convenience, attached is a new page with the changes incorporated.

If you have any further questions, please contact me at (201)299-2264.

Very truly yours,

  
M. W. Laggart  
Manager, BWR Licensing
