Docket Nos. 50-348
50-364

Director, Nuclear Reactor Regulation
U. S. Nuclear Regulatory Commission
Washington, D.C. 20555

Attention: Mr. S. A. Varga

Joseph M. Farley Nuclear Plant - Units 1 and 2
Correction of Technical Specification Pages

Gentlemen:

In letter dated October 13, 1983 Alabama Power Company requested Technical Specification changes to incorporate a slightly positive moderator temperature coefficient (MTC) at low power levels and an increased enthalpy hot channel factor (F Delta H) limit below full power. These changes were approved by the NRC in Amendment No. 37 and Amendment No. 27 for Units 1 and 2 respectively.

During review of plant procedures to incorporate the technical specification changes, some administrative errors were found. Several typographical errors were found and an omission in the ACTION statement was made. The corrected ACTION statement was considered in the original evaluation described in the October 13, 1983 letter. As discussed with the Farley Nuclear Plant NRC Project Manager, it is requested that the corrected pages be reissued as soon as possible in order that return to power for Unit 1 not be affected.

If you have any questions, please advise.

Yours truly,

F. L. Clayton, Jr.
