Reference: Docket No. 50-285

Dear Mr. Collins:

IE Bulletin 83-08; Electrical Circuit
Breakers With an Undervoltage Trip
Feature in Use in Safety-Related Applications
Other Than the Reactor Trip System

The Omaha Public Power District conducted a review of the subject bulletin. The Fort Calhoun Station does utilize GE AK-2 circuit breakers extensively throughout the 480 V distribution system. However, examination of electrical schematics, wiring diagrams, and plant calibration procedures revealed that safety-related circuit breakers are tripped by shunt devices only. As such, they do not utilize the UV trip feature discussed in IE Bulletin 83-08. Therefore, this letter hereby serves as a negative declaration, as required by the subject bulletin.

Sincerely,

W. C. Jones
Division Manager
Production Operations
