In the Matter of:)

COMMONWEALTH EDISON COMPANY)

(Byron Nuclear Station,
Units 1 and 2))

DOCKETING & SERVICE
BRANCH
Docket Nos. 50-454 OL
50-455 OL

COMMONWEALTH EDISON COMPANY'S
ANSWERS TO INTERVENORS' SECOND SET OF
INTERROGATORIES

Interrogatory 1. Were reinspectors in the
reinspection program aware at any time of the identity of
the inspector whose work he/she was reinspecting? If so,
please state:

- a. In what manner the reinspector was made aware.
- b. At what point in the reinspection process the reinspector was made aware.

Answer: Yes, with minor exceptions. Virtually
all types of reinspections were performed with the original
inspection reports, so that reinspectors were aware of the
initials or names of the original inspectors. Certain
reinspections, particularly reinspections of "as built"
dimensions, were performed without previously-generated data
from inspectors, and therefore these reinspections did not
provide the identity of inspectors to reinspectors.

For those reinspections in which reinspectors were
aware of the identities of the original inspectors, the
reinspectors were made aware of the identities before the

3503

reinspection occurred, at the time of receipt of the reinspection package.

Interrogatory 2. Were reinspectors aware of the results of the original inspector? If so, please state:

- a. In what manner the reinspector was made aware.
- b. At what point in the reinspection process the reinspector was made aware.

Answer: The answer provided in response to Interrogatory 1, above, is in large part pertinent here. For most of the reinspections in which the reinspectors were aware of the identity of the original inspectors, the reinspectors likewise were aware of the data generated by the original inspectors.

Interrogatory 3. Please describe in detail under what circumstances "third party review" (as that term is used in the final report) was done (e.g., objective inspections, subjective inspections, agreed reinspections, disagreed reinspections, etc.) including the identity of the third party.

Answer: "Third party review" was performed by Sargent & Lundy and by Daniels Construction personnel (due to a shortage of S&L inspectors). Third party review was utilized only for subjective (i.e., visual weld inspection) attributes and not for objective attributes. Such review was performed in all cases of disagreement between inspector and reinspectors, except in the rare instances in which an attribute was dispositioned between the time of reinspection and third party review. In addition, some third party

review was performed at the beginning of the reinspection program in order to familiarize the third party reviewers with the program and to ensure that reinspections were properly performed by contractor reinspectors. These early informal third party reviews encompassed both agreed and disagreed inspections.

Interrogatory 4. Please describe in detail under what circumstances "overinspections" (as that term is used in the final report) was done (e.g., objective inspections, subjective inspections, agreed reinspections, disagreed reinspections, etc.) including the identity of the overinspector.

Answer: The "overinspections" discussed in the February, 1984 Byron QC Inspector Reinspection Program Report referred to ^a unit concept inspection of the reinspection program performed by Pittsburgh Testing Laboratory. This unit concept inspection is discussed in Section IV of the February, 1984 report.
